SPECIAL RAIL CARS AT SHUANG-CHENG-TZU MISSILE TEST CENTER AND OTHER SELECTED LOCATIONS IN CHINA

1. The special rail cars observed on photography ofat the possible propellant handling and storage area, Shuang-cheng-tzu Missile Test Center (41 00N - 100 14E), China have been described as specially designed cars for the transportation of missile fuels, liquid oxygen or other chemicals. The tank cars also observed at this location (see Figure 1 and 2) may be used to transport nitric acid or some other type acid.
2. A search was conducted of selected chemical combines in China that are known producers of nitric acid and nitrogen fertilizers for the appearance of these special rail cars and also possible chemical tank cars. No special rail cars were observed at any of the chemical combines, however tank cars could be seen at some of the chemical plants. Six tank cars were observed on photography of
3. All measurements were made by the NPIC Technical Intelligence Division on the 880 comparator using the multiple pointing technique. Lengths and widths of the rail tank cars were difficult to point to as images were poor and there were no sharp corners to locate. Dimensions in most cases may be considered accurate within
